Date: 5/20/2016

Addendum # 2

Bid: Security Monitoring

A pre-bid walkthrough was held on 5/16/2016 at 10:00 AM at the project site. Potential bidders were afforded the opportunity to walk through the various sites and view the equipment and services currently in use. A sign-in sheet follows this document.

The following are clarifications and answers provided at this meeting:

- Wicomico County is in the process of the award of a new radio system. Construction will occur on the towers and additional towers and buildings will be added, but the existing buildings will stay in place. There is the potential for additional monitoring services at these additional buildings after constructed.
- The high-temperature control, smoke alarm, and access control systems are all not included in the bid or inspection requirements. The winning bidder should only inspect the existing equipment or any new and installed equipment that is part of the monitoring system. The four yearly inspections should be included in the yearly price.
- The cameras at the tower sites are viewed using the website "alarm.com." The Pittsville Tower location has a Verizon DSL connection, while the other two towers have a fiber connection. Wicomico County does not need to stick with this method of viewing, but there should be some solution for remote viewing of these sites.
- The cameras at the interior of the Emergency Services offices and 911 Center are displayed on various monitors around the building (monitor locations are noted in the bid documents). This ability should be maintained.
- There is no requirement for smartphone capability (such as, remote arming and disarming of the system)
